environmental conditions		
Operating data note	For storage, mounting and operation of lead-acid batteries, the relevant DIN/VDE regulations or country-specific regulations (e.g. VDE 0510 Part 2/EN 50272-2) must be observed. You must ensure that the battery site is sufficiently ventilated. Possible sources of ignition must be at least 50 cm away.	
Ambient temperature	,	
during operation	-15 +50 °C	
during transport	-20 +50 °C	
during storage	-20 +50 °C	
Relative temporary capacity loss at 20 °C in a month	3 %	
typical		
Service life		
Service life of energy storage		
• typical Note	capacity falls to 80 % of original capacity (according to EUROBAT)	
● at 20 °C typical	4 y	
• at 30 °C typical	2 y	
• at 40 °C typical	1 y	
● at 50 °C typical	0.5 y	
Ambient temperature during storage Note	Along with the storage and operating temperature, other factors such as the duration of the storage period and the charge status during storage have a decisive influence on the possible useful life. Batteries should therefore be stored as briefly as possible, always fully charged, and within the temperature range 0 to +20 °C.
